Quarterly Progress Report:
Project Number and Title: C20.2020: Advanced Sensing Technologies for Practical UAV-Based Condition Assessment
Research Area: Transportation Infrastructure Monitoring and Assessment for Enhanced Life
PI: Dryver Huston, University of Vermont
Co-PI(s): Tian Xia, University of Vermont; Eric Landis, University of Maine; Tzuyang Yu, University of Massachusetts Lowell
Reporting Period: 4/1/21 – 6/30/21
Submission Date: June 30, 2021

Overview:

This is a collaborative research project with the University of Vermont, University of Maine, and University of Massachusetts Lowell. This quarter was the first quarter of activity on the project. Some of the highlights are:

1. Evaluation of acoustic sensing techniques for concrete quality assessment – A high-frequency (100 kHz) sensor served as a prototype pickup for air-couple acoustic tapping response signals, perhaps those that correspond to subsurface voids and delaminations, and for those from a UAV, Figure 1.

2. Assembly of a UAV with protective cage for possible underside bridge deck inspection – Figure 2 shows the custom UAV.

3. Examination of microwave transceiver for use on UAV – Figure 3 shows the portable microwave transceiver.

4. Completion of literature survey on commercially available UAVs with potential for underside bridge deck inspection – The literature survey is attached as a separate document.

Meeting the Overarching Goals of the Project:

The overarching goals of this project center on the synergistic application of unmanned aerial vehicles (UAVs) with active acoustic sensing (AAS) and synthetic aperture radar (SAR) for the underside inspection of bridge decks. Employing such UAV-AAS-SAR systems may i) reduce inspection cost by more than 50%, ii) improve inspectors' safety, and iii) mitigate traffic interference with little or no traffic control measures needed. The plan is 1) develop an acoustic sensor capable of actively interrogating concrete delamination of bridge decks from underneath, 2) develop a compact radar sensor capable of remotely scanning concrete surface for delamination detection, 3) develop a UAV platform capable of housing the acoustic and the radar sensors for bridge inspection, 4) develop image processing and interpretation algorithms for condition assessment, and 5) work with partners in the bridge inspection industry to guide design decisions to produce a practical and useful system.

Progress in this past quarter advanced the goals of the project with preliminary efforts at custom UAV fabrication, acoustic sensing and microwave sensing.

Accomplishments:

Completion of literature survey on UAVs.

Task Progress and Budget:

Table 1: Task Progress			
Task Number	**Start Date**	**End Date**	**% Complete**
Task 1.1 (Phase 1.A): Survey of Commercial UAVs	4/1/21	6/30/21	100
Task 2.1 (Phase 1.A): Design and build acoustic sensor arm (ASA)	4/1/21	3/31/22	0
Task 2.2 (Phase 1.A): Select and configure acoustic sensors	4/1/21	3/31/22	25
Task 3.1 (Phase 1.A): Calibration of baseline interference on radar signals	4/1/21	3/31/22	10
Task 3.2 (Phase 1.A): Development of radar signal and image conditioning algorithms through laboratory tests	4/1/21	3/31/22	10
Task 7.1 (Phase 1.A): Documentation	4/1/21	3/31/22	25
Task 2.3 (Phase 1.B): Select and configure acoustic signal processing system	4/1/22	9/30/22	0
Task 2.4 (Phase 1.B): Assemble ASA system and test performance in laboratory	4/1/22	3/31/23	0
Task 4 (Phase 1.B): Laboratory validation and correlation of AAS and radar sensors	4/1/22	3/31/23	0
Task 5 (Phase 1.B): Laboratory integration of UAV, AAS, and radar sensors	4/1/22	3/31/23	0
Task 6.1 (Phase 1.B): Field modification of UAV-AAS-radar system, data collection, and data analysis	7/1/22	3/31/23	0

Task 7.2 (Phase 1.B): Documentation, dissemination, and reporting	4/1/22	3/31/23	0
Task 2.5 (Phase 2): Integrate ASA system into UAV	4/1/23	9/30/23	0
Task 2.6 (Phase 2): Laboratory and field testing of UAV with integrated ASA	4/1/23	9/30/23	0
Task 2.7 (Phase 2): Data analysis, reporting and dissemination	4/1/23	9/30/23	0
Task 3.3 (Phase 2): Modification of onboard SAR imaging sensor through field tests	4/1/23	9/30/23	0
Task 6.2 (Phase 2): Field modification of UAV-AAS-radar system, data collection, and data analysis	4/1/23	9/30/23	0
Task 7.3 (Phase 2): Documentation, dissemination, and reporting	4/1/23	9/30/23	0
Phase 1.A Overall	4/1/21	3/31/22	25
Phase 1.B Overall	4/1/22	3/31/23	0
Phase 2 Overall	4/1/23	9/30/23	0

Table 2: Budget Progress University of Vermont		
Project Budget	**Spend – Project to Date 6/30/21**	**% Project to Date 6/30/21**
Phase 1.A $144,000	$ 38.84	0.03%
Phase 1.B Full Budget	0	0
Phase 2 Full Budget	0	0

Professional Development/Training Opportunities:
NA

Technology Transfer:
Communicated with Technical Champion industry partner Robert Blunt of VHB about possible field testing later this year.

Who is/are the Technical Champion(s) for this project? List all.
Name: Robert Blunt
Title: Senior Project Manager
Organization: VHB
Location: South Portland, ME
Email Address: rblunt@vhb.com

Changes:

Due to delays in finalizing the contracts and budgets, the project did not on the proposed date of October 1, 2020, and instead started on April 1, 2021. The task schedule listed in this report has been adjusted accordingly.

Planned Activities:

The planned activities for the next quarter generally follow those laid out in the original proposal. These include:

1. Acoustic sensing – Continue with laboratory testing on more realistic delaminated concrete samples.

2. Microwave sensing – Configure the microwave sensor to fit on UAV and evaluate background noise.

3. UAV system – Continue with custom UAV system development.

4. Field testing – Explore potential of preliminary field tests in late summer or autumn.
